Subordinated notes	NR	80.375	N/A	N/A	Residual

Note: This presale report is based on information as of May 28, 2024. The ratings shown are preliminary. This report does not constitute a recommendation to buy, hold, or sell securities. Subsequent information may result in the assignment of final ratings that differ from the preliminary ratings. (i) The class A-1 notes, class A-1L-A loans, and class A-1L-B loans will be issued pari passu. The class A-1L-A loans are convertible into class A-1 notes at any time, while the class A-1L-B loans and class A-1 notes are not convertible into any other class. NR--Not rated. N/A--Not applicable.

Executive Summary

ABPCI Direct Lending Fund CLO XVII LLC is a \$661.175 million middle market collateralized loan obligation (CLO) managed by AB Private Credit Investors LLC, a subsidiary of AllianceBernstein. This is AB Private Credit Investors LLC's first CLO in 2024.

Based on provisions in the transaction documents and the portfolio characteristics:

- The transaction will be collateralized by at least 90.00% senior secured loans, cash, and

- eligible investments, with a minimum of 95.00% of the loan borrowers required to be based in the U.S.
- Of the identified underlying collateral obligations, 95.54% have credit ratings (which may include confidential ratings, private ratings, and credit estimates) assigned by S&P Global Ratings.
- Of the identified underlying collateral obligations, 0.65% have recovery ratings (which may include confidential and private ratings) assigned by S&P Global Ratings.

Key Credit Metrics

Selected credit metrics

ABPCI Direct Lending Fund CLO XVII LLC	
Total leverage (x)(i)	7.23
Par subordination ('AAA'/'BBB') (%)	39.00/18.00
WA cost of debt (%) (ii)	2.58
Portfolio WAS (excluding floors) (%)	5.59
SDR ('AAA'/'BBB') (%)	74.94/53.78
WA portfolio recovery ('AAA'/'BBB') (%)	49.39/62.37

(i)Total debt to equity (excluding any class X debt, if applicable). (ii)Spread over SOFR for all classes, excluding the subordinated notes and, if applicable, any class X debt. Additionally, if there is a fixed-rate tranche, SOFR is subtracted from the fixed coupon in the calculation.
 WA--Weighted average. SDR--Scenario default rate.

Transaction Timeline/Participants

Transaction timeline

Expected closing date	May 30, 2024.
Effective date	To be determined.
Debt payment frequency	Quarterly, beginning Aug. 1, 2024.
Non-call period end date	May 30, 2026.
Reinvestment period end date	Aug. 1, 2028.
First static date(i)	Dec. 31, 2036.
Second static date(i)	Dec. 31, 2037.
Stated maturity date	Aug. 1, 2036.

(i)The transaction has the potential to become entirely or partially static before the end of the reinvestment period, on the first or second static date. See table 1 below for details.

Participants

Collateral manager	AB Private Credit Investors LLC.
Placement agent	GreensLedge Capital Markets LLC.
Trustee	U.S. Bank Trust Co. N.A.

Rationale

The preliminary ratings assigned to ABPCI Direct Lending Fund CLO XVII LLC's floating-rate debt reflect our assessment of:

- The diversification of the collateral pool, which consists primarily of middle market speculative-grade (rated 'BB+' and lower) senior secured term loans;
- The credit enhancement provided through subordination, excess spread, and overcollateralization;
- The experience of the collateral manager's team, which can affect the performance of the rated debt through portfolio identification and ongoing management; and
- The transaction's legal structure, which is expected to be bankruptcy remote.

We may choose to make qualitative adjustments to our analysis when rating CLO tranches to reflect the likelihood that changes to the underlying assets' credit profile may affect a portfolio's credit quality in the near term. This is consistent with paragraph 15 of our criteria for analyzing CLOs (see "Global Methodology And Assumptions For CLOs And Corporate CDOs," published June 21, 2019). To do this, we may review the likelihood of near-term changes to the portfolio's credit profile by evaluating the transaction's specific risk factors. Based on our review of these factors, we believe there is adequate cushion between this CLO tranches' break-even default rates (BDRs) and scenario default rates (SDRs) to address the possibility of near-term changes to the portfolio's credit quality.

Environmental, Social, And Governance

We regard the exposure to environmental, social, and governance (ESG) credit factors in the transaction as being broadly in line with our benchmark for the sector (see "ESG Industry Report Card: Collateralized Loan Obligations," published March 31, 2021). For CLOs, we view the exposure to environmental credit factors as below average, to social credit factors as below average, and to governance credit factors as average, primarily due to the diversity of the assets within the sector.

The transaction documents prohibit assets issued by obligors whose principal business is directly derived from certain activities, including but not limited to the following industries:

- Thermal coal mining;
- Controversial weapon production or trading;
- Hazardous chemicals;
- Adult entertainment;
- Tobacco;
- Marijuana-related business;
- Payday or predatory lending;
- Political campaign committees and political candidates;
- Embassies and foreign consulates; and
- Private prison management or services.

Accordingly, since the exclusion of assets from these industries does not result in material differences between the transaction and our ESG benchmark for the sector, we made no specific adjustments in our rating analysis to account for any ESG-related risks or opportunities.

Rating Considerations

In our analysis, we considered the factors in table 1, among others.

Table 1

Rating considerations

Risk	Risk description	Mitigating factors
Reduction in cash flow	Defaults, adverse interest rate movements, and low recoveries can reduce the cash flow generated by the underlying portfolio and affect the issuer's ability to meet its obligations in a timely manner.	S&P Global Ratings' quantitative analysis simulates various default patterns and interest rate movements under various stress scenarios, considering portfolio characteristics, payment mechanics, covenants, collateral quality tests, and excess spread.
Excess concentration in certain types of collateral obligations	The collateral manager's ability to invest in certain types of collateral is outlined in the indenture. Larger concentrations in certain obligations can introduce additional risks to the rated debt.	S&P Global Ratings' cash flow analysis generally assumes that the underlying portfolio contains the maximum allowable amount of certain types of collateral obligations to stress test the transaction for concentration risk. Examples include obligations that are current-pay, fixed-rate, fully deferrable, and long-dated, as well as assets rated 'CCC+' or lower and assets paying less frequently than quarterly. For current-pay, long-dated, and 'CCC+' or lower obligations, we generally apply stresses when the exposure is greater than 10.0%, 5.0%, and 7.5%, respectively. For more details on allowable maximum concentrations for this transaction, see tables 8 and 9.
Collateral manager trading performance	During the reinvestment period, the collateral manager can change the underlying portfolio's composition, thus exposing the transaction to potential deterioration in credit enhancement. The collateral manager can reinvest all proceeds received during the reinvestment period.	The transaction documents generally require that any collateral obligation purchased will have equal or higher par value (or, with respect to proceeds from credit risk and defaulted obligations, that the obligation purchased with those sale proceeds will at least equal the related sale proceeds), or that the trade maintains or increases the transaction's O/C level. However, the principal collateral amount is generally not required to be maintained if the collateral manager has built sufficient excess par in the transaction so that the collateral balance exceeds the portfolio's reinvestment target par balance after the purchase. In addition, the indenture generally requires that each additional purchase satisfies (or, if not satisfies, either maintains, or improves) the concentration limits, coverage tests, and certain collateral quality tests.
Divergence of the effective date portfolio from preliminary assumptions	Most underlying portfolios are not fully purchased by the transaction's closing date. Therefore, there is a risk that the fully ramped-up portfolio at the transaction's effective date will be materially different from the one presented to S&P Global Ratings for its preliminary analysis.	S&P Global Ratings offers collateral managers a formula-based version of its CDO Monitor at the transaction's closing. This tool is intended to assist the collateral manager in maintaining a similar credit risk and cash flow profile to what was initially presented for our preliminary analysis.

Table 1

Rating considerations (cont.)

Risk	Risk description	Mitigating factors
Exposure to covenant-lite loans	The collateral manager can purchase covenant-lite loans (those that do not contain regular financial maintenance covenants for the lending party's benefit) for up to a certain percentage of the underlying portfolio (see table 8). Exposure to these types of loans may reduce the transaction's recovery prospects.	For covenant-lite loans that do not have an asset-specific recovery rating, we apply reduced recovery rates in our cash flow analysis (41.0% under a 'AAA' stress scenario versus 50.0% for a senior secured first-lien loan that is not covenant-lite). In addition, the transaction documents mandate that any loan that is pari passu with a non-covenant-lite loan of the same obligor, or that contains a cross-default provision with such loan, will also use the reduced recovery rates regardless of whether these pari passu or cross-defaulted loans are counted as covenant-lite for the purposes of portfolio concentration limits. For covenant-lite loans that do have an asset-specific recovery rating, the absence of financial maintenance covenants is factored into our recovery analysis and generally results in lower estimated recovery rates.
Long-dated collateral obligations can introduce market value risk	A portfolio containing long-dated collateral obligations exposes a transaction to market value risk. To repay the debtholders at the transaction's maturity, the collateral manager will be forced to sell those obligations at the prevailing market price, which may be below par.	According to the transaction documents, the collateral manager cannot purchase any long-dated collateral obligations, but may receive a limited amount of long-dated collateral obligations under certain circumstances. Any long-dated collateral obligations will receive a haircut in the O/C numerator. The weighted average life test must generally be satisfied (or maintained or improved, subject to additional conditions found in the transaction documents) following any maturity amendment.
Exposure to qualified first-lien loans	The collateral manager can purchase qualified first-lien loans (those secured by the same collateral package as the senior secured loan but have a first and last out recovery priority upon default) for up to a certain percentage of the underlying portfolio (see table 8). Exposure to these types of loans may reduce the transaction's recovery prospects.	For qualified first-lien loans that do not have an asset-specific recovery rating, we apply reduced recovery rates in our cash flow analysis (33% under a 'AAA' level of stress versus 50% for a senior secured first-lien loan that is not covenant-lite). The transaction documents restrict the debt on the basis of leverage or total loan-to-value, and it is our understanding that the first-out portion of any qualified first-lien loan will not exceed a capped percentage of the total facility.

Table 1

Rating considerations (cont.)

Risk	Risk description	Mitigating factors
Potential principal distributions to the static class A-2, B, C, D, and E debt and subordinated notes before full payments to the class A-1, A-1L-A, and A-1L-B debt; there is no deleveraging benefit of paydowns to the reinvesting debt from the class A-1, A-1L-A, A-1L-B, A-2, B, C, D, or E static debt.	The transaction has the potential to become entirely or partially static before the end of the reinvestment period, on the first or second static date. This will lead to the distribution of principal proceeds from the first or second static portfolio of remaining static collateral to the static subordinated notes after paying the static class A-1, A-1L-A, A-1L-B, A-2, B, C, D, and E debt in full but before the reinvesting class A-1L-A, A-1L-B, A-2, B, C, D, and E debt has fully paid down. Additionally, because any excess cash from these static portfolios will be distributed to the static subordinated notes, any remaining class A-1L-A, A-1L-B, A-2, B, C, D, and E reinvesting debt will not see the benefit of O/C increases (all else being equal), as seen when only a portion of a class's initial issuance amount is outstanding. See tables 13-16 for details on the first and second static interest and principal payment priorities.	In our cash flow analysis, we ran two additional separate scenarios assuming the reinvestment period ends at the first and second static dates. Under these scenarios, we looked at the results that pointed to the most stressful results for the preliminary rated debt. At the time of our analysis, the first static date scenario pointed to the most stressful results. We will continue to provide surveillance on the transaction in the same manner by looking at multiple scenarios.

O/C--Overcollateralization.

Collateral Manager

AB Private Credit Investors LLC is the corporate direct lending platform of AllianceBernstein in the U.S middle market space. As of March 2024, AB Private Credit Investors LLC had over \$17.10 billion in capital available for investment.

Analysis of past CLO 2.0 transactions (i.e., deals issued after the financial crisis) that are managed by AB Private Credit Investors LLC and its affiliates and rated by S&P Global Ratings reveals:

- An average overlap in collateral composition of 40.03%, which is lower than the average of 57.68% for all CLO 2.0 transactions rated by S&P Global Ratings;
- An average portfolio turnover rate of 13.95% over the past 12 months, which is lower than the average of 16.06% for all CLO 2.0 transactions rated by S&P Global Ratings;
- An industry concentration that favors software and capital markets;
- That of the transactions that are still in the reinvestment period, 78.57% have a current par amount above the effective date target par; and
- An average senior overcollateralization cushion of 10.52% at the transaction's closing date.

Quantitative Analysis

In analyzing this transaction, S&P Global Ratings conducted a quantitative review consisting of two analyses: a portfolio analysis and a cash flow analysis.

Understanding our portfolio and cash flow analyses

For the portfolio analysis, S&P Global Ratings ran the portfolio presented to us through the CDO Evaluator model, which defaults portions of the underlying collateral based on the default probability and correlation assumptions defined in S&P Global Ratings criteria. This resulted in a set of SDRs that represent expected default levels for the portfolio under the different stress scenarios associated with each rating level (see chart 1).

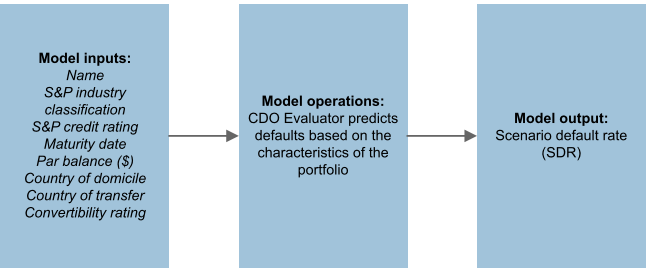

For example, the 'AAA' stress scenario assumes an extreme level of stress, one similar to what was experienced during the Great Depression, while the 'BBB' stress scenario assumes a high, but less severe, level of stress that is more akin to the 2008 recession. As a result, the portfolio will experience a higher level of defaults in the 'AAA' stress scenario than the 'BBB' stress scenario.

For the cash flow analysis, we input the transaction-specific structural features presented to us into the Standard & Poor's Cash Flow Evaluator model to generate a base case set of cash flows. These cash flows are then subjected to various default timing and interest rate stress scenarios to arrive at a BDR for each rated class of debt (see chart 2).

For each class, the BDR represents the maximum amount of defaults that the class can withstand while still being able to pay timely interest and ultimate principal to its debtholders. Classes with higher subordination typically have higher BDRs.

Connecting the portfolio and cash flow analyses

For a tranche to achieve a particular rating, it must be able to withstand the level of defaults projected by the CDO Evaluator and still pay timely interest and principal (see chart 3).

Chart 3

Assignment of tranche rating

Copyright © 2024 by Standard & Poor's Financial Services LLC. All rights reserved.

The results shown in table 2 indicate that the rated debt has sufficient credit enhancement to withstand our projected default levels.

Table 2

Credit enhancement

Class	Preliminary rating	BDR (%)	SDR (%)	BDR cushion (%)
A-1	AAA (sf)	84.48	74.94	9.54
A-1L-A	AAA (sf)	84.48	74.94	9.54
A-1L-B	AAA (sf)	84.48	74.94	9.54
A-2	AAA (sf)	80.92	74.94	5.98
B	AA (sf)	83.09	66.83	16.26
C (deferrable)	A (sf)	71.35	59.90	11.45
D (deferrable)	BBB- (sf)	60.61	49.33	11.28
E (deferrable)	BB- (sf)	54.87	40.85	14.02

BDR--Break-even default rate. SDR--Scenario default rate.

Supplemental tests

We also conduct a largest-industry default test and a largest-obligor default test according to "Global Methodology And Assumptions For CLOs And Corporate CDOs," published June 21, 2019. Under these assumptions, the debt can withstand the loss amounts indicated in table 3 at their preliminary rating levels.

Table 3

Supplemental tests

Class	Preliminary rating	Preliminary amount (mil. \$)	Largest-industry default test loss amount (mil. \$)	Largest-obligor default test loss amount (mil. \$)
A-1	AAA (sf)	222.80	145.23	128.00
A-1L-A	AAA (sf)	120.00	145.23	128.00
A-1L-B	AAA (sf)	40.00	145.23	128.00
A-2	AAA (sf)	19.80	145.23	128.00

Table 3

Supplemental tests (cont.)

Class	Preliminary rating	Preliminary amount (mil. \$)	Largest-industry default test loss amount (mil. \$)	Largest-obligor default test loss amount (mil. \$)
B	AA (sf)	46.20	124.69	107.47
C (deferrable)	A (sf)	52.80	N/A	85.44
D (deferrable)	BBB- (sf)	39.60	N/A	60.80
E (deferrable)	BB- (sf)	39.60	N/A	47.54

N/A--Not applicable.

Collateral Quality Tests

In addition to the quantitative framework, we produce and review collateral quality metrics to assess specific risks inherent in a transaction. Results for the collateral quality tests, based on the identified portfolio provided to us, are shown in table 4.

Table 4

Collateral quality metrics--performing identified collateral

Test	WA	Covenant	Margin
WA life (years)(i)	4.17	9.00	4.83
WAS (including floors) (%)	5.59	4.75	0.84
WA fixed coupon (%) (ii)	N/A	7.00	N/A
WA rating	B-	N/A	N/A

(i)The calculated value may include an adjustment to some asset maturity inputs if the resulting pool's WA maturity is less than the length of the reinvestment period. (ii)The calculated value does not give credit to excess spread, which may positively adjust the calculation when determining compliance with the covenant. WA--Weighted average. WAS--Weighted average spread. N/A--Not applicable.

Portfolio Characteristics

Metrics based on the portfolio presented to S&P Global Ratings and the level of ramp-up completion are shown in tables 5A and 5B.

Table 5A

Target collateral obligations

Target par balance (mil. \$)	660.00
Par balance of identified collateral (mil. \$)	588.06
Par balance of collateral not yet identified (mil. \$)	71.94
S&P Global Ratings' ratings and confidential indications (%) of identified collateral)(i)	95.54

(i)May include confidential ratings, private ratings, and credit estimates.

Table 5B

Identified collateral obligations (obligors)

No. of obligors	95
Avg. obligor holding (%)	1.05
Largest-obligor holding (%)	2.89
Smallest-obligor holding (%)	0.08

In the portfolio data referenced for this analysis, the issuer identified approximately 89.10% of the portfolio's collateral. As the portfolio composition changes, the information and results presented in tables 6 and 7 and charts 4-7 are also likely to change.

Obligor concentration

Table 6 shows the top five obligor holdings of the underlying portfolio presented to S&P Global Ratings as of the date of this publication.

Table 6

Top five obligor holdings

Obligor reference	Industry	Security type	S&P Global Ratings' credit rating	S&P Global Ratings' implied rating	CreditWatch/outlook	Notional amount (mil. \$)		Notional amount (%)	
						Obligor	Cumulative	Obligor	Cumulative
1	Diversified telecommunication services	Senior secured	N/A	No	N/A	17.01	17.01	2.58	2.58
2	IT services	Senior secured	N/A	No	N/A	16.88	33.89	2.56	5.13
3	IT services	Senior secured	N/A	No	N/A	16.16	50.05	2.45	7.58
4	Automobiles	Senior secured	N/A	No	N/A	13.95	64.00	2.11	9.70
5	IT services	Senior secured	N/A	No	N/A	13.56	77.55	2.05	11.75

N/A--Not applicable.

Portfolio Investment Guidelines

The underlying portfolio will consist primarily of U.S. dollar-denominated senior secured loans to middle market corporate borrowers. The collateral portfolio's investment guidelines are expected to comply with the limitations shown in table 8.

Table 8

Collateral pool guidelines

Type of obligation	Limit (%)
Other than senior secured loans, cash, and eligible investments	10.0
Bonds	0.0
Covenant-lite loans(i)	15.0
Current-pay obligations(ii)	5.0
Debtor-in-possession obligations	5.0
Deferrable obligations: fully/partially(iii)	0.0/7.5
Delayed-drawdown and revolving obligations	10.0
Discount obligations	10.0
Fixed-rate obligations(ii)	5.0
Long-dated obligations(ii)	0.0
Obligations purchased at a price less than 70.0% of its principal balance	0.0
Obligations that pay interest less frequently than quarterly (but not less than semiannually)(ii)	5.0
Obligor and its affiliates: single/second lien	3.0/1.5

Table 8

Collateral pool guidelines (cont.)

	Limit (%)
Participation interests	10.0
Recurring revenue loans	12.0
S&P Global Ratings' industry classification: single/third-largest/second-largest/largest	12.0/15.0/17.5/20.0
S&P Global Ratings' credit rating of 'CCC+' or below(ii)	18.75
Second-lien, first-lien last-out, and qualified first-lien loans, and senior secured notes: of which, second-lien loans/senior secured notes	10.0/5.0/5.0
Structured finance obligations	0.0
Location	
Other than the U.S.	0.0
Emerging markets	0.0

(i)Covenant-lite loans are assigned lower recovery ratings than similar obligations that require continued compliance with covenants. (ii)S&P Global Ratings generally conducts its cash flow analysis assuming the CLO holds the maximum amount of these types of obligations permitted under the transaction documents. For current-pay, long-dated, and 'CCC+' or lower obligations, we generally apply stresses when the exposure is greater than 10.0%, 5.0%, and 7.5%, respectively.

Risk of concentration in certain obligation types

S&P Global Ratings considers larger concentrations of the obligation types shown in table 9 to pose additional risk to the transaction. If the transaction can purchase those collateral obligations, our quantitative analysis would consider the associated risk (see table 8 above for transaction-specific limitations).

Table 9

Risks of obligation types

Obligation type	Risk specific to the obligation
Current-pay obligations	S&P Global Ratings' criteria allow transactions to purchase current-pay obligations as long as the collateral manager reasonably believes the obligor will remain current on all contractual payments (as well as other factors). Due to the increased risk associated with these obligations, they may be carried at the higher of their issue credit rating or 'CCC' in the portfolio analysis, which may increase the SDRs produced by the CDO Evaluator. In addition, any excess holding allowance above 10.0% is carried as defaulted in the cash flow analysis, which will decrease the BDRs produced by the Cash Flow Evaluator.
Deferrable obligations	Obligations where interest payments may be deferred can result in a discrepancy in the timing of cash inflows and outflows. If this mismatch is significant, it may result in a shortfall in cash available to pay the rated debtholders. S&P Global Ratings conducts its cash flow analysis assuming that the transaction holds the maximum amount of deferrable obligations permitted. The timing differences will be captured in the BDRs generated by the Cash Flow Evaluator.
Fixed-rate obligations	Because interest payments for most of the rated debt is tied to a floating reference rate (initially, three-month SOFR), obligations in the underlying portfolio that pay a fixed rate create exposure to interest rate movements. Excess spread may decline if market rates change significantly over the transaction's life. To account for this risk, S&P Global Ratings' cash flow analysis assumes the transaction holds the maximum amount of fixed-rate obligations permitted. The results are captured in the BDRs generated by the Cash Flow Evaluator.

Table 9

Risks of obligation types (cont.)

Obligation type	Risk specific to the obligation
Long-dated obligations	Collateral obligations scheduled to mature after the transaction's stated maturity date introduce market value risk because the collateral manager must sell the obligations at the prevailing market price to pay the rated debtholders. To account for this risk, if the allowable bucket exceeds 5.0% of the asset balance, absent any other risk mitigating factors, S&P Global Ratings' cash flow analysis haircuts the par amount of these obligations (10.0% per year after the transaction's stated maturity), which will lower the BDRs produced by the Cash Flow Evaluator. This stress may also be considered for long-dated assets that the transaction can hold after any maturity amendments.
Obligations that pay interest less frequently than quarterly	Because CLO transactions typically require quarterly interest payments to be made to the debtholders, a portfolio consisting of collateral obligations that pay interest less frequently creates a discrepancy in the timing of cash inflows and outflows. If this mismatch is significant, it may result in a shortfall in cash available to pay the rated debtholders. S&P Global Ratings conducts its cash flow analysis assuming that the transaction holds the maximum amount of non-quarterly obligations permitted. The timing differences will be captured in the BDRs generated by the Cash Flow Evaluator.
Obligations rated 'CCC+' or below by S&P Global Ratings	The transaction documents typically limit the amount of obligations rated 'CCC+' or below that the collateral manager can purchase. A higher concentration of these obligations will increase the SDRs produced by the CDO Evaluator.

SDR--Scenario default rate. BDR--Break-even default rate.

Debt Payment Considerations**Overcollateralization and interest coverage tests**

The rated debt benefits from certain structural features that require sequential mandatory redemption upon a breach of any overcollateralization or interest coverage test (see tables 10-12).

Table 10

O/C and I/C tests

Class	Actual O/C (%)	Min. O/C required (%)	Min. I/C required (%)
A/B	147.06	137.10	115.00
C	131.58	123.60	110.00
D	121.95	116.00	105.00
E	113.64	108.60	N/A

O/C--Overcollateralization. I/C--Interest coverage. N/A--Not applicable.

Payment priorities--reinvesting percentage

Under the transaction documents, the collateral's interest and principal collections are payable according to separate payment priorities. On each payment date during and after the reinvestment period, unless an acceleration following an event of default occurs, the proceeds will be distributed in the priorities outlined in tables 11 and 12.

Table 11

Reinvesting interest waterfall payment priority

Priority	Payment
1	Reinvesting percentage of taxes and fees, then administrative expenses (capped).
2	Reinvesting percentage of senior management fee.
3	Class A-1 interest, class A-1L-A interest, and class A-1L-B interest on reinvesting debt amount, pro rata.
4	Class A-2 reinvesting debt interest.
5	Class B reinvesting debt interest.
6	Class A/B reinvesting coverage tests(i)(ii).
7	Class C reinvesting debt interest.
8	Class C reinvesting coverage tests(i)(ii).
9	Class C reinvesting debt deferred interest.
10	Class D reinvesting debt interest.
11	Class D reinvesting coverage tests(i)(ii).
12	Class D reinvesting debt deferred interest.
13	Class E reinvesting debt interest.
14	Class E reinvesting coverage test(i)(ii).
15	Class E reinvesting debt deferred interest.
16	Effective date ratings confirmation. If it is not obtained, pay according to the debt payment sequence(ii) to the extent necessary to obtain a rating agency confirmation.
17	Reinvesting percentage of administrative expenses (uncapped).
18	Reinvesting percentage of subordinated management fee.
19	To the reinvesting contribution account, at the manager's direction.
20	During the reinvestment period, invest in eligible securities and/or purchase additional collateral obligations, or distribute to the holders of the subordinated notes, at the manager's discretion.
21	Remaining proceeds to the holders of the subordinated notes.

(i) If it fails, pay according to the debt payment sequence until each test is satisfied. (ii) Debt payment sequence: Class A-1 principal (including defaulted interest), class A-1L-A principal (including defaulted interest), and class A-1L-B principal (including defaulted interest), pro rata; then class A-2 principal (including defaulted interest); then class B principal (including defaulted interest); then class C interest and deferred interest; then class C principal; then class D interest and deferred interest; then class D principal; then class E interest and deferred interest; and then class E principal.

Table 12

Reinvesting principal waterfall payment priority

Priority	Payment
1	Items 1-5 of the reinvesting interest waterfall.
2	Class A/B reinvesting coverage tests(i)(ii).
3	Class C reinvesting debt interest(iii).
4	Class C reinvesting coverage tests(i)(ii).
5	Class C reinvesting debt deferred interest(iii).
6	Class D reinvesting debt interest(iii).
7	Class D reinvesting coverage tests(i)(ii).
8	Class D reinvesting debt deferred interest(iii).
9	Class E reinvesting debt interest(iii).
10	Class E reinvesting coverage test(i)(ii).
11	Class E reinvesting debt deferred interest(iii).
12	Effective date ratings confirmation. If it is not obtained, pay according to the debt payment sequence(ii) to the extent necessary to obtain a rating agency confirmation.
13	In connection with a redemption or special redemption amount, pay according to the debt payment sequence(ii).
14	During the reinvestment period, invest in eligible securities and/or purchase additional collateral obligations.
15	After the reinvestment period, pay according to the debt payment sequence(ii).
16	Items 17 and 18 of the reinvesting interest waterfall.
17	Remaining proceeds to the holders of the subordinated notes.

(i) If it fails, pay according to the debt payment sequence until each test is satisfied. (ii) See table 11 footnotes for the debt payment sequence. (iii) In each case, only to the extent that the relevant class is the controlling class.

Payment priorities--first static percentage

Under the transaction documents, the collateral's interest and principal collections from the first static portfolio's collateral are payable according to separate payment priorities. On each payment

date during and after the first static date, unless an acceleration following an event of default occurs, the proceeds will be distributed in the priorities outlined in tables 13 and 14.

Table 13

First static interest waterfall payment priority

Priority	Payment
1	First static percentage of taxes and fees, then administrative expenses (capped).
2	First static percentage of senior management fee.
3	Class A-1 interest, class A-1L-A interest, and class A-1L-B interest on first static debt amount, pro rata.
4	Class A-2 first static debt interest.
5	Class B first static debt interest.
6	Class A/B first static coverage tests(i)(ii).
7	Class C first static debt interest.
8	Class C first static coverage tests(i)(ii).
9	Class C first static debt deferred interest.
10	Class D first static debt interest.
11	Class D first static coverage tests(i)(ii).
12	Class D first static debt deferred interest.
13	Class E first static debt interest.
14	Class E first static coverage test(i)(ii).
15	Class E first static debt deferred interest.
16	Effective date ratings confirmation. If it is not obtained, pay according to the first static debt payment sequence(ii) to the extent necessary to obtain a rating agency confirmation.
17	First static percentage of administrative expenses (uncapped).
18	First static percentage of subordinated management fee.
19	After the first static period, remaining proceeds to the holders of the subordinated notes.

(i)If it fails, pay according to the first static debt payment sequence until each test is satisfied. (ii)First static debt payment sequence: Class A-1 principal (including defaulted interest), class A-1L-A principal (including defaulted interest), and class A-1L-B principal (including defaulted interest), pro rata; then class A-2 principal (including defaulted interest); then class B principal (including defaulted interest); then class C interest and deferred interest; then class C principal; then class D interest and deferred interest; then class D principal; then class E interest and deferred interest; and then class E principal.

Table 14

First static principal waterfall payment priority

Priority	Payment

2	Class A/B first static coverage tests(i)(ii).
3	Class C first static debt interest(iii).
4	Class C first static coverage tests(i)(ii).
5	Class C first static debt deferred interest(iii).
6	Class D first static debt interest(iii).
7	Class D first static coverage tests(i)(ii).
8	Class D first static debt deferred interest(iii).
9	Class E first static debt interest(iii).
10	Class E first static coverage test(i)(ii).
11	Class E first static debt deferred interest(iii).
12	Effective date ratings confirmation. If it is not obtained, pay according to the first static debt payment sequence(ii) to the extent necessary to obtain a rating agency confirmation.
13	In connection with a redemption, pay according to the first static debt payment sequence(ii).
14	Pay according to the debt payment sequence(ii) until first static debt amount has been paid in full.
15	Items 17 and 18 of the first static interest waterfall.
16	Remaining proceeds to the holders of the subordinated notes.

(i)If it fails, pay according to the first static debt payment sequence until each test is satisfied. (ii)See table 13 footnotes for the first static debt payment sequence. (iii)In each case, only to the extent that the relevant class is the controlling class.

Payment priorities--second static percentage

Under the transaction documents, the collateral's interest and principal collections from the second static portfolio's collateral are payable according to separate payment priorities. On each payment date during and after the second static date, unless an acceleration following an event of default occurs, the proceeds will be distributed in the priorities outlined in tables 15 and 16.

Table 15

Second static interest waterfall payment priority

Priority	Payment
1	Second static percentage of taxes and fees, then administrative expenses (capped).
2	Second static percentage of senior management fee.
3	Class A-1 interest, class A-1L-A interest, and class A-1L-B interest on second static debt amount, pro rata.
4	Class A-2 second static debt interest.
5	Class B second static debt interest.
6	Class A/B second static coverage tests(i)(ii).
7	Class C second static debt interest.
8	Class C second static coverage tests(i)(ii).
9	Class C second static debt deferred interest.
10	Class D second static debt interest.
11	Class D second static coverage tests(i)(ii).
12	Class D second static deferred interest.
13	Class E second static interest.
14	Class E second static coverage test(i)(ii).
15	Class E second static deferred interest.
16	Effective date ratings confirmation. If it is not obtained, pay according to the second static debt payment sequence(ii) to the extent necessary to obtain a rating agency confirmation.
17	Second static percentage of administrative expenses (uncapped).
18	Second static percentage of subordinated management fee.
19	After the second static period, remaining proceeds to the holders of the subordinated notes.

(i)If it fails, pay according to the second static debt payment sequence until each test is satisfied. (ii)Second static debt payment sequence: Class A-1 principal (including defaulted interest), class A-1L-A principal (including defaulted interest), and class A-1L-B principal (including defaulted interest), pro rata; then class A-2 principal (including defaulted interest); then class B principal (including defaulted interest); then class C interest and deferred interest; then class C principal; then class D interest and deferred interest; then class D principal; then class E interest and deferred interest; and then class E principal.

Table 16

Second static principal waterfall payment priority

Priority	Payment
1	Items 1-5 of the second static interest waterfall.
2	Class A/B second static coverage tests(i)(ii).
3	Class C second static debt interest(iii).
4	Class C second static coverage tests(i)(ii).
5	Class C second static debt deferred interest(iii).
6	Class D second static debt interest(iii).
7	Class D second static coverage tests(i)(ii).
8	Class D second static debt deferred interest(iii).
9	Class E second static debt interest(iii).
10	Class E second static coverage test(i)(ii).
11	Class E second static deferred interest(iii).
12	Effective date ratings confirmation. If it is not obtained, pay according to the second static debt payment sequence(ii) to the extent necessary to obtain a rating agency confirmation.
13	In connection with a redemption, pay according to the second static debt payment sequence(ii).
14	Pay according to the second static debt payment sequence(ii) until second static debt amount has been paid in full.
15	Items 17 and 18 of the second static interest waterfall.
16	Remaining proceeds to the holders of the subordinated notes.

(i)If it fails, pay according to the second static debt payment sequence until each test is satisfied. (ii)See table 15 footnotes for the second static debt payment sequence. (iii)In each case, only to the extent that the relevant class is the controlling class.

Application Of Standard & Poor's CDO Monitor/Compliance With Standard & Poor's CDO Monitor Test

Standard & Poor's CDO Monitor is a tool that collateral managers use during the reinvestment period to determine if a particular trade or series of trades increases the risk to the rated liabilities.

The CDO Monitor Test will be considered passing if the results indicate that the current portfolio produces an SDR that is equal to or below the transaction's BDR. There is no requirement that the

CDO Monitor Test be considered after the reinvestment period, or when reinvesting proceeds from the sale of a credit risk or a defaulted obligation or proceeds from an equity security.

For this transaction, the non-model version of CDO Monitor may be used as an alternative to the model-based approach. This version of CDO Monitor is built on the foundation of six portfolio benchmarks, which are used to provide insight into the characteristics that inform the way S&P Global Ratings assesses credit quality. These benchmarks are meant to enhance transparency for investors and other CLO market participants by allowing them to compare metrics across transactions and assess changes within a given CLO over time (for more details, see "S&P Global Ratings' Updated Assumptions For CDO Monitor Non-Model Version," published June 21, 2019, and "Standard & Poor's Introduces Non-Model Version Of CDO Monitor," published Dec. 8, 2014).

Table 17 shows the benchmarks for ABPCI Direct Lending Fund CLO XVII LLC in the context of average values by vintage.

Table 17

CDO Monitor metrics

ABPCI Direct Lending Fund CLO XVII LLC	
S&P Global Ratings' weighted average rating factor(i)	3,744.18
Default rate dispersion(ii)	293.85
Obligor diversity measure(iii)	77.51
Industry diversity measure(iv)	7.78
Regional diversity measure(v)	1.00
Weighted average life (years)(vi)	3.85

(i)S&P Global Ratings' weighted average rating factor (SPWARF): The SPWARF is calculated by multiplying the par balance of each collateral obligation that has a 'CCC-' or higher rating from S&P Global Ratings by the S&P Global Ratings' rating factor, then summing the total for the portfolio, and then dividing the result by the aggregate principal balance of all collateral obligations included in the calculation. (ii)Default rate dispersion (DRD): The DRD is calculated by multiplying the par balance for each collateral obligation that has a 'CCC-' or higher rating from S&P Global Ratings by the absolute value of the difference between the S&P Global Ratings' rating factor and the SPWARF, then summing the total for the portfolio, and then dividing the result by the aggregate principal balance of the collateral obligations included in the calculation. (iii)Obligor diversity measure (ODM): The ODM is the measure of the effective number of obligors in the pool obtained by squaring the result for each obligor and taking the reciprocal of the sum of these squares [i.e., $1/\sum()^2$]. (iv)Industry diversity measure (IDM): The IDM is the effective number of industries in the pool obtained in the same way as the ODM. (v)Regional diversity measure (RDM): The RDM is the effective number of regions in the pool obtained in the same way as the ODM and IDM. (vi)Weighted average life: The portfolio's weighted average life is based on the remaining number of years to maturity for each loan.

Surveillance

S&P Global Ratings will maintain active surveillance on the rated debt until the debt matures or is retired, or until its credit ratings on the transaction have been withdrawn. The purpose of surveillance is to assess whether the rated debt is performing within the initial parameters and assumptions applied to each rating category. The issuer is required under the terms of the transaction documents to supply periodic reports and notices to S&P Global Ratings to maintain continuous surveillance on the rated debt. For more information on our CLO surveillance process, see "CLO Spotlight: S&P Global Ratings' Surveillance Process For Monitoring CLO Transactions," published Oct. 14, 2022.
