Presale:

CIFC Funding 2017-I Ltd./CIFC Funding 2017-I LLC

This presale report is based on information as of Feb. 1, 2017. The ratings shown are preliminary. This report does not constitute a recommendation to buy, hold, or sell securities. Subsequent information may result in the assignment of final ratings that differ from the preliminary ratings.

Preliminary Ratings

Class	Preliminary rating(i)	Balance (mil. \$)	Overcollateralization (%)	Subordination (%)	Interest rate (%)
A	AAA (sf)	503.60	158.86	37.79	3ML plus 1.36
B	NR	92.00	134.32	26.43	3ML plus 1.75
C	NR	60.40	121.95	18.97	3ML plus 2.50
D	NR	46.40	113.90	13.23	3ML plus 3.75
E	NR	33.60	108.70	9.08	3ML plus 6.45
Subordinated notes	NR	73.54	98.82	N/A	N/A
X	NR	4.80	N/A	N/A	3ML plus 2.45

(i)The rating on each class of securities is preliminary and subject to change at any time.
3ML--Three-month LIBOR. NR--Not rated. N/A--Not applicable.

Executive Summary

CIFC Funding 2017-I Ltd. is a \$800 million broadly syndicated collateralized loan

Primary Credit Analyst:

Anna Widernik, Centennial (303) 721-4858; anna.widernik@spglobal.com

Secondary Contact:

Andrew J Loken, New York (1) 212-438-2755; andrew.loken@spglobal.com

See complete contact list on last page(s)

obligation (CLO) managed by CIFIC CLO Management LLC, a majority-owned affiliate of CIFIC Asset Management (CIFIC). CIFIC manages \$10.9 billion of bank loans in 27 CLOs.

Based on provisions in the transaction documents:

- The transaction will be collateralized by at least 92.5% senior secured loans, with a minimum of 85.0% of the loan issuers required to be based in the U.S. or Canada.
- A maximum of 80.0% of the loans in the collateral pool can be covenant-lite.
- 94.5% of the underlying collateral obligations have credit ratings assigned by S&P Global Ratings.
- 95.75% of the underlying collateral obligations have recovery ratings issued by S&P Global Ratings.

Key Credit Metrics

Selected Credit Metrics		
	CIFIC Funding 2017-I Ltd.	Three-month average(i)
Total leverage (x)(ii)	10.1	9.20
Subordination ('AAA') (%)	37.79	38.49
Weighted average cost of debt (%) (iii)	1.89	1.97
Portfolio WAS (excluding LIBOR floors) (%)	4.13	3.89
Excess spread (%) (iv)	2.24	1.92
SDR ('AAA') (%)	66.66	65.71
WA portfolio recovery ('AAA') (%)	44.94	45.05
Obligor diversity measure (%) (v)	202.59	117.11

(i) Three-month average comprises S&P Global Ratings-rated deals. (ii) Total debt/equity. (iii) Spread over LIBOR for all classes, excluding the subordinated notes (if there is a fixed-rate tranche, LIBOR is subtracted from the fixed coupon in the calculation). (iv) WAS minus the weighted average cost of debt. (v) The effective number of obligors in the underlying collateral, obtained by squaring the result for each obligor and taking the reciprocal of the sum of these squares [i.e., $1/\sum(i)^2$]. WA--Weighted average. WAS--Weighted average spread. SDR--Scenario default rate.

Deal comparison

Compared to other broadly syndicated CLOs that we assigned preliminary ratings to in the three months ended Dec. 31, 2016, CIFIC Funding 2017-I, Ltd. has:

- A higher total leverage and lower subordination.
- A lower weighted average cost of debt.
- A higher weighted average spread and available excess spread, which shows a stronger underlying portfolio from a cash flow perspective.
- A higher scenario default rate and lower weighted average recovery rate), which shows weaker underlying portfolio from a credit perspective.
- A portfolio with a much higher obligor diversity measure.

Transaction Timeline/Participants

Transaction Timeline	
Expected closing date	March 9, 2017.
Effective date	To be determined.
Non-call period end date	April 21, 2019
Reinvestment period end date	April 21, 2021.
Stated maturity date	April 21, 2029.
Note payment frequency	Quarterly, beginning July 21, 2017.

Participants	
Collateral manager	CIFC CLO Management LLC.
Initial purchaser	Deutsche Bank Securities Inc.
Trustee	U.S. Bank N.A.

Rationale

The preliminary ratings assigned to CIFC Funding 2017-I Ltd.'s \$503.60 floating-rate notes reflect our assessment of:

- The diversified collateral pool, which consists primarily of broadly syndicated speculative-grade senior secured term loans that are governed by collateral quality tests.
- The credit enhancement provided through the subordination of cash flows, excess spread, and overcollateralization.
- The collateral manager's experienced team, which can affect the performance of the rated notes through collateral selection, ongoing portfolio management, and trading.
- The transaction's legal structure, which is expected to be bankruptcy remote.

Rating Considerations

In our analysis, we considered the factors in table 1, among others.

Table 1

Rating Considerations		
Risk	Risk description	Mitigating factors
Reduction in cash flow	Defaults, adverse interest rate movements, and low recoveries can reduce the cash flow generated by the underlying portfolio and affect the issuer's ability to meet its obligations in a timely manner.	S&P Global Ratings' quantitative analysis simulates various default patterns and interest rate movements under various stress scenarios taking into account portfolio characteristics, payment mechanics, covenants, collateral quality tests, and excess spread.
Excess concentration in certain types of collateral obligations	The collateral manager's ability to invest in certain types of collateral is outlined by the indenture. Larger concentrations in certain obligations can introduce additional risks to the rated notes.	S&P Global Ratings' cash flow analysis assumes the underlying portfolio contains the maximum allowable amount of certain types of collateral obligations to stress test the transaction for concentration risk. Examples include: 7.5% 'CCC' rated, 2.5% current pay, 2.0% fixed rate, 5.0% deferrable, and 5.0% assets paying less frequently than quarterly. For more detail please see table 11.
Collateral manager trading performance	During the reinvestment period (and, subject to additional restrictions, after the reinvestment period), the collateral manager can change the underlying portfolio's composition, thus exposing the transaction to potential deterioration in credit enhancement. For this particular transaction, the collateral manager can reinvest proceeds from credit risk sales or unscheduled prepayments during and after the reinvestment period.	The transaction documents require that any collateral obligation sold is replaced with another of equal or higher par value, or that the trade maintains or increases the level of the transaction's overcollateralization. Credit risk, defaulted, and equity securities are exempt from these restrictions so the collateral manager is not forced to purchase a discounted obligation. In addition, the indenture requires that each additional purchase satisfy, maintain, or improve certain additional collateral quality tests. After the reinvestment period, the asset purchased must have the same or higher S&P Global Ratings' credit rating and the same or lower stated maturity than the asset being replaced.

Table 1

Rating Considerations (cont.)		
Risk	Risk description	Mitigating factors
Divergence of effective date portfolio from preliminary assumptions	Most underlying portfolios are not fully purchased by closing. Therefore, there is a risk that the fully ramped-up portfolio at the transaction's effective date will be materially different than the one presented to S&P Global Ratings for its preliminary analysis.	S&P Global Ratings offers collateral managers a formula-based version of its CDO Monitor at closing. This tool is intended to assist the collateral manager in maintaining a similar credit risk and cash flow profile to what was initially presented for our preliminary analysis.
Exposure to covenant-lite loans	The collateral manager can purchase covenant-lite loans (those that do not contain incurrence or maintenance covenants for the benefit of the lending party) for up to a certain percentage of the underlying portfolio (see table 11). Exposure to these types of loans may reduce the transaction's recovery prospects.	For covenant-lite loans that do not have an asset-specific recovery rating, we apply reduced recovery rates in our cash flow analysis (41% under a 'AAA' level of stress versus 50% for a senior secured first-lien loan that is not covenant-lite).
Long-dated collateral obligation can introduce market value risk	A portfolio containing long-dated collateral obligations exposes a transaction to market value risk. To repay the noteholders at the transaction's maturity, the collateral manager will be forced to sell such obligations at the prevailing market price, which may be below par.	According to the transaction documents, the collateral manager cannot purchase any long-dated collateral obligations, nor vote in favor of any waiver, modification, or amendment that would extend a collateral obligation's maturity beyond the notes' stated maturity.

Collateral Manager

CIFIC manages \$10.9 billion of bank loans in 27 CLOs across four fund families. CIFIC intends to hold well-diversified portfolios until expected maturity but conducts continuous underwriting revisions of the portfolio. It benefits from its size in the market, as well its proprietary internal rating system. CIFIC made distributions on every payment date even through the 2008-2009 financial crisis.

Analysis of all past CLOs managed by CIFIC CLO Management LLC and rated by S&P Global Ratings reveals an average overlap in collateral composition of 68.58%. This is higher than the average of 53.95% for all 2016 CLOs rated by S&P Global Ratings.

We met with the collateral manager to assess the firm's ability to carry out its duties, as defined in the transaction documents.

Quantitative Analysis

In analyzing this transaction, S&P Global Ratings conducted a quantitative review consisting of two analyses: a portfolio analysis and a cash flow analysis.

Understanding our portfolio and cash flow analyses

For the portfolio analysis, S&P Global Ratings ran the portfolio presented to us through the CDO Evaluator model, which defaults portions of the underlying collateral based on the default probability and correlation assumptions defined in S&P Global Ratings criteria. This resulted in a set of scenario default rates (SDRs), which represent expected default levels for the portfolio under the different stress scenarios associated with each rating level (see chart 1).

For example, the 'AAA' stress scenario assumes an extreme level of stress, one similar to what was experienced during the Great Depression, while the 'BBB' stress scenario assumes a high, but less severe, level of stress that is more akin to the most recent recession. As a result, the portfolio will experience a higher level of defaults in the 'AAA' stress scenario than the 'BBB' stress scenario.

For the cash flow analysis, we input the transaction-specific structural features presented to us into the Standard & Poor's Cash Flow Evaluator model to generate a base case set of cash flows. These cash flows are then subjected to various default timing and interest rate stress scenarios to arrive at a break-even default rate (BDR) for each rated class of notes (see chart 2).

For each class, the BDR represents the maximum amount of defaults that it can withstand while still being able to pay timely interest and ultimate principal to its noteholders. Classes with higher subordination typically have higher BDRs.

Chart 1

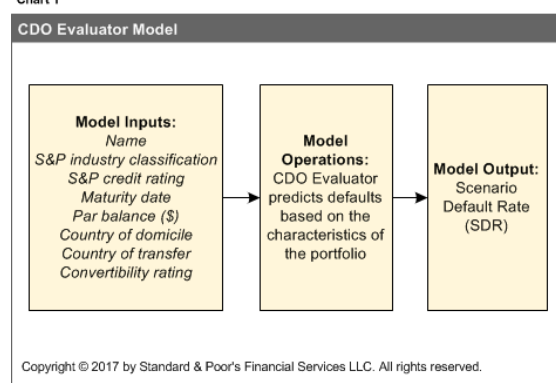

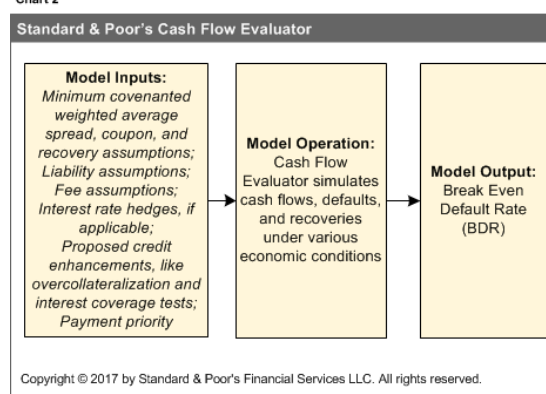

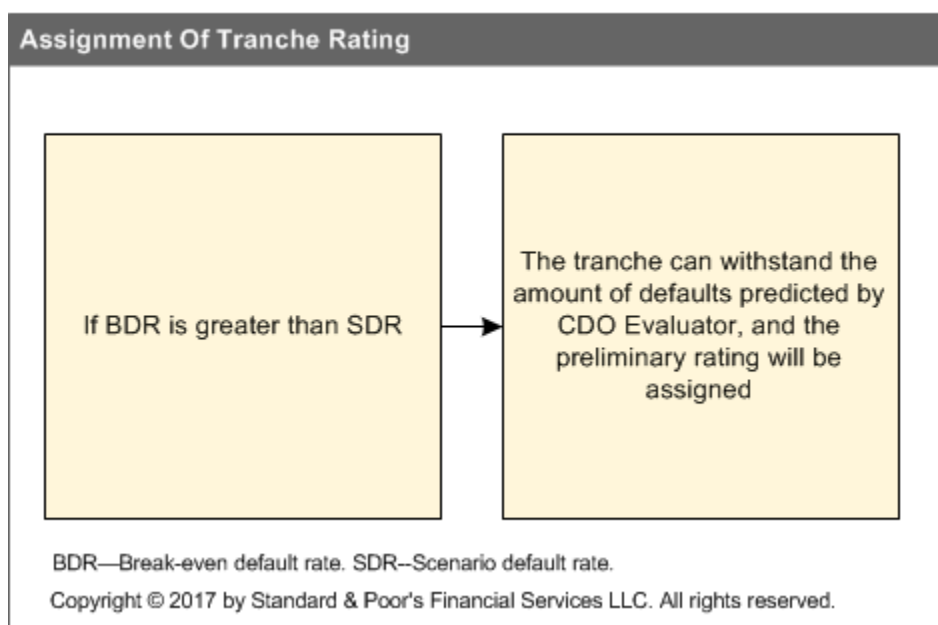

Chart 2

Connecting the portfolio and cash flow analyses

For a tranche to achieve a particular rating, it must be able to withstand the level of defaults projected by the CDO Evaluator and still pay timely interest and principal (see chart 3).

Chart 3

The results shown in table 2 indicate that the rated notes have sufficient credit enhancement to withstand our projected default levels.

Table 2

Credit Enhancement				
Class	Subordination (%)	BDR (%)	SDR (%)	BDR cushion (%)
A	37.79	69.45	66.66	2.79

Supplemental tests

We also conduct a largest-industry default test and largest-obligor default test according to "Global Methodologies And Assumptions For Corporate Cash Flow And Synthetic CDOs," published Aug. 8, 2016. Under these assumptions, the notes can withstand the loss amounts indicated in table 3 at their preliminary rating levels.

Table 3

Supplemental Tests				
Class	Preliminary rating	Preliminary amount (mil. \$)	Largest industry default test loss amount (mil. \$)	Largest obligor default test loss amount (mil. \$)
A	AAA (sf)	503.60	54.44	58.97

NR--Not rated. N/A--Not applicable.

Sensitivity analysis

Finally, several of the assumptions specified in the collateralized debt obligation criteria are stressed to evaluate the sensitivity of the transaction's performance to those parameters. Such stresses include:

- A negative 10% adjustment to the proposed collateral pool's recovery rates relative to each tranche's weighted average recovery rate.

- Defaults on the underlying portfolio biased to include the highest spread and lowest base-case recoveries.
- Intra- and inter-industry correlation adjustments as described in table 4.

Table 4

Correlation		
Scenario	Within industry (%)	Between industries (%)
Below base case	15.0	5.0
Base case equals preliminary rating	20.0	7.5
Above base case	25.0	10.0

Table 5 illustrates the rating migration that would occur under each of the aforementioned scenarios.

Table 5

Sensitivity Analysis Rating Migration					
Class	Preliminary rating	Resulting rating transition			
		10% recovery decrease	Spread default bias	Recovery default bias	Correlation above base case
A	AAA (sf)	AA+	AAA	AA+	AA+

BDR--Break-even default rate.

Collateral Quality Tests And Credit Metrics

In addition to the quantitative framework, we produce and review other metrics to assess specific risks inherent in a transaction. Results for the collateral quality tests based on the identified portfolio provided to us are shown in table 6, and credit metrics based on the transaction's most current structure appear in table 7.

Table 6

Collateral Quality Metrics – Performing Identified Collateral			
Test	Weighted average	Covenant	Margin
Weighted average life (years)	6.39	8.00	1.61
Weighted average spread (including LIBOR floors) (%)	4.13	3.80	0.11
Standard deviation of spread (%)	1.29	N/A	N/A
Weighted average LIBOR floor (%)	0.98	N/A	N/A
Weighted average fixed coupon (%) ⁽ⁱ⁾	N/A	7.50	N/A
Weighted average rating	B	N/A	N/A

(i) Calculated value does not give credit to excess spread, which may positively adjust the calculation when determining compliance with the covenant. N/A--Not applicable.

Table 7

Credit Metrics			
Credit metrics	CIFIC Funding 2017-I Ltd.	Three-month trailing average	Difference
Total leverage (x)	10.01	9.20	0.81
Subordination ('AAA'/'BBB') (%)	37.79	38.49	(0.70)
Weighted average cost of debt (%)	1.89	1.97	(0.08)
Portfolio WAS (excluding LIBOR floors)(%)	4.13	3.89	0.24
Excess spread (%)	2.24	1.92	0.32

Table 7

Credit Metrics (cont.)			
Credit metrics	CIFIC Funding 2017-I Ltd.	Three-month trailing average	Difference
SDR ('AAA'/'BBB') (%)	66.66	65.71	0.95
WA portfolio recovery (WARR) ('AAA'/'BBB') (%)	44.94	45.05	(0.11)

SDR--Scenario default rate. WAS--Weighted average spread. WARR--Weighted average recovery rate.

Portfolio Characteristics

Metrics based on the portfolio presented to S&P Global Ratings and the level of ramp-up completion are shown in tables 8A and 8B.

Table 8A

Target Collateral Obligations	
Target par balance (mil. \$)	800.00
Par balance of identified collateral (mil. \$)	560.50
Par balance of collateral not yet identified (mil. \$)	239.50
Ramp-up completion (% of target par balance)	70.06
S&P Global Ratings' rating (% of identified collateral)	94.89
S&P Global Ratings' implied rating (% of identified collateral)	5.11

Table 8B

Target Collateral Obligations (Obligors)	
No. of obligors	145
Avg. obligor holding (%)	0.69
Largest-obligor holding (%)	1.55
Smallest-obligor holding (%)	0.16

In the portfolio data referenced for this analysis, the issuer had identified approximately 63.24% of the portfolio's collateral. As the portfolio composition changes, the information and results presented in table 9 and charts 4-7 are also likely to change.

Obligor concentration

The underlying portfolio presented to S&P Global Ratings for its rating analysis consists of obligors in the industries shown in table 9.

Table 9

Top Obligor Holdings As Of Feb. 1, 2017									
Obligor reference	Industry	Security type	S&P Global Ratings' credit rating	S&P Global Ratings' implied rating	CreditWatch/outlook	Notional amount (mil. \$)		Notional amount (%)	
						Obligor	Cumulative	Obligor	Cumulative
1	Specialty retail	Senior secured	B-	N/A	Stable	8.00	8.00	1.00	1.00
2	Healthcare providers and services	Senior secured	BB	N/A	Stable	8.00	16.00	1.00	2.00
3	Trading companies and distributors	Senior secured	BB+	N/A	Stable	8.00	24.00	1.00	3.00

Table 9

Top Obligor Holdings As Of Feb. 1, 2017 (cont.)

Obligor reference	Industry	Security type	S&P Global Ratings' credit rating	S&P Global Ratings' implied rating	CreditWatch/outlook	Notional amount (mil. \$)		Notional amount (%)	
						Obligor	Cumulative	Obligor	Cumulative
4	Communications equipment	Senior secured	B	N/A	Stable	6.07	30.07	0.76	3.76
5	Specialty retail	Senior secured	B+	N/A	Stable	6.00	36.07	0.75	4.51
6	Auto components	Senior secured	B	N/A	Stable	6.00	42.07	0.75	5.26
7	Healthcare providers and services	Senior secured	B+	N/A	Stable	6.00	48.07	0.75	6.01
8	Pharmaceuticals	Senior secured	B	N/A	Stable	6.00	54.07	0.75	6.76
9	Specialty retail	Senior secured	B	N/A	Stable	6.00	60.07	0.75	7.51
10	Communications equipment	Senior secured	BB-	N/A	Stable	6.00	66.07	0.75	8.26

N/A--Not applicable.

Industry and ratings distribution

Chart 4 shows the industry distribution in the portfolio. Chart 5 shows the ratings distribution in the portfolio.

Chart 4

Chart 5

Recovery rating and maturity distribution

Table 10 and chart 6 below presents a summary of identified portfolio S&P Global Ratings' loan recovery rates. Chart 7 shows the maturity distribution in the identified portfolio.

Table 10

Performing Identified Collateral Modeled WARR

Liability rating	WARR (%)	Min. covenanted WARR (%)
AAA (sf)	44.94	44.50

WARR--Weighted average recovery rate.

Chart 6

Chart 7

Portfolio Investment Guidelines

The underlying portfolio will consist primarily of U.S. dollar-denominated senior secured loans to broadly syndicated corporate borrowers. The collateral portfolio's effective date and reinvestment guidelines are expected to comply with the limitations shown in table 11.

Table 11

Collateral Pool Guidelines

	Limit (%)
Type of obligation	
Other than senior secured loans, cash, and eligible investments	7.5%
Covenant-lite loans(i)	80.0
Current-pay obligations(ii)	2.5
Debtor-in-possession obligations	7.5
Deferrable obligations(ii)	5.0
Delayed-drawdown and revolving obligations	10.0
Fixed-rate obligations(ii)	2.0
Long-dated obligations	
Obligations that pay interest less frequent than quarterly(ii)	5.0
Obligor and its affiliates: single/up to 5	2.0/2.5
Participation interests	20.0

Table 11

Collateral Pool Guidelines (cont.)	
	Limit (%)
Second-lien and senior unsecured loans	10.0
S&P Global Ratings' industry classification single/largest/next three largest	10.0/15.0/12.0
S&P Global Ratings' credit rating of 'CCC+' or below	7.5
Structured finance obligations	0.0
Location	
Other than the U.S.	20.0
Emerging markets	0.0

(i)Covenant-lite loans are assigned lower recovery ratings than similar obligations that require continued compliance with covenants. (ii)S&P Global Ratings conducts its cash flow analysis assuming that the CLO holds the maximum amount of these types of obligations permitted under the transaction documents. CLO--Collateralized loan obligation. N/A--Not applicable.

Risk of concentration in certain obligation types

S&P Global Ratings considers larger concentrations in the types of obligations shown in table 12 to pose additional risk to the transaction. If the transaction can purchase such collateral obligations, our quantitative analysis would consider the risk associated with such types of obligations (see table 11 above for transaction-specific limitations).

Table 12

Risks Of Obligation Types	
Obligation type	Risk specific to the obligation
Current-pay obligations	S&P Global Ratings' criteria allow transactions to purchase current-pay obligations as long as the collateral manager reasonably believes that the obligor will remain current on all contractual payments, as well as other factors. Due to the increased risk associated with these obligations, they are carried at 'CCC-' in the portfolio analysis, which will increase the SDRs produced by the CDO Evaluator.
Deferrable obligations	Obligations where interest payments may be deferred can result in a discrepancy in the timing of cash inflows and outflows. If this mismatch is significant, it may result in a shortfall in cash available to pay the rated noteholders. S&P Global Ratings conducts its cash flow analysis assuming that the transaction holds the maximum amount of deferrable obligations permitted. The timing differences will be captured in the BDRs generated by the Cash Flow Evaluator.
Fixed-rate obligations	Because interest payments for the majority of the rated notes are tied to LIBOR, obligations in the underlying portfolio that pay a fixed rate create exposure to interest rate movements. Should market rates change significantly over the transaction's life, this may reduce excess spread. To account for such risk, S&P Global Ratings' cash flow analysis assumes the transaction holds the maximum amount of fixed-rate obligations permitted. The results are captured in the BDRs generated by the Cash Flow Evaluator.
Long-dated obligations	Collateral obligations scheduled to mature after the transaction's stated maturity date introduce market value risk, as the collateral manager must sell the obligations at the prevailing market price to pay the rated noteholders. To account for this risk, S&P Global Ratings' cash flow analysis haircuts the par amount of these obligations (10% per year after the transaction's stated maturity), which will lower the BDRs produced by the Cash Flow Evaluator. This stress would also be considered for long-dated assets that the transaction can hold after any maturity amendments.
Obligations that pay interest less frequently than quarterly	Because transactions typically require quarterly interest payments to be made to the noteholders, a portfolio consisting of collateral obligations that pay interest less frequently creates a discrepancy in the timing of cash inflows and outflows. If this mismatch is significant, it may result in a shortfall in cash available to pay the rated noteholders. S&P Global Ratings conducts its cash flow analysis assuming that the transaction holds the maximum amount of non-quarterly obligations permitted. The timing differences will be captured in the BDRs generated by the Cash Flow Evaluator.
S&P Global Ratings' rating of 'CCC+' or below	Transaction documents typically limit the amount of obligations 'CCC+' or below that the collateral manager can purchase. A higher concentration of obligations rated 'CCC+' or lower will increase the SDRs produced by the CDO Evaluator.

BDR—Break-even default rate. SDR—Scenario default rate.

Note Payment Considerations

Overcollateralization, interest coverage, and reinvestment overcollateralization tests

The rated notes benefit from certain structural features that require sequential mandatory redemption upon a breach of any overcollateralization or an interest coverage test. Additionally, during the reinvestment period, the rated notes benefit from the reinvestment of up to a certain amount of the excess interest proceeds, captured upon breach of the transaction's interest diversion test (see table 13).

Table 13

Overcollateralization, Interest Coverage, And Reinvestment Overcollateralization Tests			
Class	Actual O/C (%)	Min. O/C required (%)	Min. I/C required (%)
B	134.32	125.30	120.00
C	121.95	114.50	115.00
D	113.90	107.90	110.00
E	108.70	104.20	N/A
Reinvestment O/C(i)	108.70	104.70	N/A

(i) The reinvestment O/C test will be satisfied when the class E O/C test is equal to or higher than the specified level. O/C—Overcollateralization. I/C—Interest coverage. N/A—Not applicable.

Payment priorities

Under the transaction documents, the collateral's interest and principal collections are payable according to separate payment priorities. On each payment date during and after the reinvestment period, unless an acceleration following an event of default occurs, proceeds will be distributed in the priorities outlined in tables 14 and 15.

Table 14

Interest Waterfall Payment Priority	
Priority	Payment
1	Taxes and fees; then, administrative expenses (capped); and then, at the manager's discretion, deposit into the expense reimbursement account (capped).
2	Senior management fee.
3	Class A note interest.
4	Class B note interest.
5	Class A/B coverage test(i).
6	Class X note interest. Then class X note principal amortization amount.
7	Class C note interest.
8	Class C coverage test(i).
9	Deferred class C note interest.
10	Class D note interest.
11	Class D coverage test(i).
12	Deferred class D note interest.
13	Class E note interest.
14	Class E overcollateralization test(i).
15	Deferred class E note interest.

Table 14

Interest Waterfall Payment Priority (cont.)	
Priority	Payment
16	Effective date ratings confirmation. If it is not obtained, pay according to the note payment sequence(ii) or purchase collateral obligations (each to the extent necessary to obtain a rating agency confirmation or until the notes are paid in full).
17	Interest diversion test (during the reinvestment period only). If it fails, use the lesser of 50% of the remaining interest proceeds or the amount needed to satisfy the test to purchase additional collateral obligations.
18	Subordinated management fee and then the deferred subordinated management fee, pro rata.
19	Administrative expenses (uncapped) and then refinancing expenses.
20	Hedge payments, if applicable, pro rata.
21	Incentive management fee and to the subordinated noteholders.

(i)If it fails, pay according to the note payment sequence until each test is satisfied. (ii)Note payment sequence: class A note interest, then class A note principal, then class B note interest, then class B note principal, then class X note interest and periodic rate shortfall amounts, then class X note principal, then class C note interest and periodic rate shortfall amounts, then class C note principal, then class D note interest and periodic rate shortfall amounts, then class D note principal, then class E note interest and periodic rate shortfall amounts, and then class E note principal.

Table 15

Principal Waterfall Payment Priority	
Priority	Payment
1	Items 1-4 of the interest waterfall, sequentially, and then 5-15 and 16 (part two) sequentially(i).
2	On any redemption date or special redemption (other than for a repricing), pay according to the note payment sequence(ii).
3	During the reinvestment period, purchase additional collateral obligations. After the reinvestment period, at the manager's discretion, reinvest proceeds from the sale of credit risk obligations, credit improved obligations, and unscheduled principal payments.
4	Note payment sequence(ii).
5	Items 18-20 of the interest waterfall, sequentially.
6	Subordinated noteholders.
7	Incentive management fee and to the subordinated noteholders.

(i)In each case, only to the extent that the relevant class is the controlling class. (ii)Note payment sequence: class A note interest, then class A note principal, then class B note interest, then class B note principal, then class X note interest and periodic rate shortfall amounts, then class X note principal, then class C note interest and periodic rate shortfall amounts, then class C note principal, then class D note interest and periodic rate shortfall amounts, then class D note principal, then class E note interest and periodic rate shortfall amounts, and then class E note principal.

Note redemption circumstances

Under the transaction documents, the notes can be redeemed before the stated maturity date of the transaction in the circumstances outlined below (see table 16).

Table 16

Note Redemption	
Redemption events	Redemption terms
Optional redemption	On any business day after the non-call period, the notes may be redeemed, in whole but not in part, at the direction of more than 50% of the subordinated notes' aggregate outstanding amount.
Mandatory redemption	If any coverage test is not met on any applicable determination date, the issuer will apply amounts available in the payment account according to the payment priority.
Refinancing	On any business day after the non-call period, any class of notes may be refinanced, in whole but not in part, at the direction of the holders of more than 50% of the subordinated notes' aggregate outstanding amount. Under the indenture, the issuer will obtain a partial refinancing only if certain conditions are met.

Table 16

Note Redemption (cont.)	
Redemption events	Redemption terms
Repricing	After the non-call period, at the direction of the holders of more than 50% of the subordinated notes' aggregate outstanding amount and with the collateral manager's consent, the spread over LIBOR on any class (other than class X) can be reduced. Any nonconsenting noteholder will be repaid in full.
Tax redemption	If a tax event occurs, any class of notes may be redeemed, in whole but not in part, before their legal final maturity. Redemption can occur at the direction of the holders of at least 50% of the affected class' or the subordinated notes' aggregate outstanding amount.

Application Of Standard & Poor's CDO Monitor/Compliance With Standard & Poor's CDO Monitor Test

Standard & Poor's CDO Monitor is a tool that collateral managers use during the reinvestment period to determine if a particular trade or series of trades increases the risk to the rated liabilities.

The CDO Monitor test will be considered passing if the results indicate that the current portfolio produces an SDR that is equal to or below the transaction's BDR. There is no requirement that the CDO Monitor test be considered after the reinvestment period, or when reinvesting proceeds from the sale of a credit risk or defaulted obligation.

For this transaction, the non-model version of CDO Monitor may be used as an alternative to the model-based approach. This version of the CDO Monitor is built on the foundation of six portfolio benchmarks, which are used to provide insight into the characteristics that inform the way S&P Global Ratings assesses credit quality. These benchmarks are meant to enhance transparency for investors and other CLO market participants by allowing them to compare metrics across transactions and assess changes within a given CLO over time (for details, see "Standard & Poor's Introduces Non-Model Version Of CDO Monitor," published Dec. 8, 2014).

Table 17 illustrates the benchmarks for CIFC Funding 2017-I Ltd. in the context of average values by vintage.

Table 17

CDO Monitor Metrics			
	CIFC Funding 2017-I Ltd.	2016 vintage	Difference
Expected portfolio default rate (%)	0.33	0.27	0.06
Default rate dispersion (%)	0.07	0.07	0.00
Obligor diversity measure	202.59	117.01	85.58
Industry diversity measure	26.19	22.08	4.11
Regional diversity measure	1.06	1.22	(0.16)
Weighted average life (years)	6.39	5.17	1.22

(i)Expected portfolio default rate (EPDR)--The weighted average portfolio expected default rate expressed as a percentage of the par balance of the assets rated 'CCC-' or higher. (ii)Default rate dispersion (DRD)--The weighted average absolute deviation of the asset default rates from the EPDR. (iii)Obligor diversity measure (ODM)--The measure of the effective number of obligors in the pool obtained by squaring the result for each obligor and taking the reciprocal of the sum of these squares [i.e., $1/\sum()^2$]. (iv)Industry diversity measure (IDM)--Effective number of industries in the pool obtained in the same way as ODM above. (v)Regional diversity measure (RDM)--Effective number of regions in the pool obtained the same way as ODM and IDM. (vi)Weighted average life (WAL)--The portfolio's weighted average life is based on the remaining number of years to maturity for each loan.

Surveillance

S&P Global Ratings will maintain active surveillance on the rated notes until the notes mature or are retired, or until S&P Global Ratings' credit ratings on the transaction have been withdrawn. The purpose of surveillance is to assess whether the rated notes are performing within the initial parameters and assumptions applied to each rating category. The issuer is required under the terms of the transaction documents to supply periodic reports and notices to S&P Global Ratings to maintain continuous surveillance on the rated notes. For more information on our CLO surveillance process, please see "CDO Spotlight: Standard & Poor's Surveillance Process For Monitoring U.S. Cash Flow CLO Transactions," April 14, 2011.

In no event shall S&P Parties be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs or losses caused by negligence) in connection with any use of the Content even if advised of the possibility of such damages.

Credit-related and other analyses, including ratings, and statements in the Content are statements of opinion as of the date they are expressed and not statements of fact. S&P's opinions, analyses and rating acknowledgment decisions (described below) are not recommendations to purchase, hold, or sell any securities or to make any investment decisions, and do not address the suitability of any security. S&P assumes no obligation to update the Content following publication in any form or format. The Content should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. S&P does not act as a fiduciary or an investment advisor except where registered as such. While S&P has obtained information from sources it believes to be reliable, S&P does not perform an audit and undertakes no duty of due diligence or independent verification of any information it receives. Rating-related publications may be published for a variety of reasons that are not necessarily dependent on action by rating committees, including, but not limited to, the publication of a periodic update on a credit rating and related analyses.

To the extent that regulatory authorities allow a rating agency to acknowledge in one jurisdiction a rating issued in another jurisdiction for certain regulatory purposes, S&P reserves the right to assign, withdraw or suspend such acknowledgment at any time and in its sole discretion. S&P Parties disclaim any duty whatsoever arising out of the assignment, withdrawal or suspension of an acknowledgment as well as any liability for any damage alleged to have been suffered on account thereof.

S&P keeps certain activities of its business units separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain business units of S&P may have information that is not available to other S&P business units. S&P has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

S&P may receive compensation for its ratings and certain credit-related analyses, normally from issuers or underwriters of securities or from obligors. S&P reserves the right to disseminate its opinions and analyses. S&P's public ratings and analyses are made available on its Web sites, www.standardandpoors.com (free of charge), and www.ratingsdirect.com and www.globalcreditportal.com (subscription), and may be distributed through other means, including via S&P publications and third-party redistributors. Additional information about our ratings fees is available at www.standardandpoors.com/usratingsfees.
